

## LTC PHARMACY AT HOME

### WHO ARE PHARMACY AT HOME PATIENTS?

These patients are community-dwelling adults and children having functional and/or medical impairments that prevent them from leaving their homes independently, and who need assistance with activities of daily living (ADLs) and /or instrumental (IADLs). For better outcomes, these adults and children require pharmacy services like those provided in LTC facilities (i.e., Skilled Nursing, Assisted Living, ICF-IID, Group Home, Hospice, Chronic Psych, etc.)

## GERIMED® IS THE LEADER IN LONG-TERM CARE (LTC) PHARMACY AT HOME RECOGNITION

Long before the COVID-19 epidemic forced many patients to isolate at home, GeriMed was working with advocacy partners, including the National Community Pharmacy Association (NCPA) on LTC Pharmacy at Home. GeriMed continues to be in discussions with CMS and other government agencies, as well as PBMs, to explain why LTC pharmacy services to patients at home requiring an institutional level of care are so important for a better quality of life, as well as a cost savings to the healthcare system, including Medicare and Medicaid.

GeriMed has been successful in obtaining a decrease in cost of goods for brand products for these LTC pharmacy at home patients. We continue to develop relationships with Medicare Part D payers to recognize these patients as LTC. Most plans do not formally recognize these homebound patients as LTC, but do offer some reimbursement relief for combination pharmacies doing both retail and LTC from the same pharmacy.
