

Liraglutide 6mg/mL

Overview

Liraglutide is a medication that belongs to a class of drugs known as GLP-1 receptor agonists. It is used in the treatment of Type 2 Diabetes by regulating blood sugar levels. Our liraglutide offerings are available in fill volumes of 5mL and 10mL.

Other Uses

Liraglutide is a medication that has emerged as a potential option for weight loss in individuals who meet specific criteria. This is due to its role in slowing gastric emptying, as well as suppressing glucagon secretion, which may reduce appetite. Liraglutide may also increase beta-cell proliferation, which facilitates the production of insulin. Liraglutide is administered once a day by injection, while other diabetes medications may need to be taken several times a day.

Dosage, Concentration, Route of Administration

Dosage: Seek advice from a licensed physician, medical director, or other healthcare provider

Concentration: 6mg/ml
