

MICC

Overview

MICC injections help support fat loss by increasing overall energy. Using MICC can also help reduce fat deposits, and accelerate metabolic processes.

Ingredient Breakdown

- **Methionine**
 - Helps break down sugars & carbohydrates and convert them into energy.
- **Inositol**
 - Converts food into energy.
- **Choline**
 - Helps nerve cells, cuts muscle recovery time, and helps convert fat into energy.
- **Cyano**
 - Aids in energy production by converting carbs into glucose.
